Sustainability
PM Group recognises that as engineers and architects we can contribute positively to the environmental, social and economic stability of the built environment.

We are continually assisting clients in their efforts for sustainability. As professional service providers, we believe it is our ethical responsibility to actively contribute to delivering sustainable development in our business practices.

We offer a wide range of sustainability services in the areas of:

- Green building design
- Sustainability assessment
- Sustainable energy solutions
- Renewable energy and clean technology
- Environment and natural resources
- Carbon management
- Sustainable supply chain management
- Sustainable procurement
- Sustainable governmental and institutional policy
- Corporate social responsibility
